

NutraSoothe

NutraSoothe is a unique and complex mixture of bioflavonoids, polyphenols, spices, and plant and berry extracts contained in the proprietary formula ATNF-10. These compounds are some of the most researched and tested polyphenols and flavonoids available today. Individually these ingredients are renowned for their antioxidant, anti-inflammatory, neuroprotective, and cardiovascular protective effects. In NutraSoothe they have been combined to work in a cooperative fashion to reduce the pro-inflammatory effects of the immune system in chronic inflammatory states. NutraSoothe will also reduce apoptosis (cellular death) which is one of the primary causes of accelerated aging.

Redox-24

Redox-24 is the most advanced antioxidant formulation on the market today. To maintain optimal health, every cell in your body requires antioxidants to protect them against damage and death from free radicals, viruses, and toxins. In addition to providing classical antioxidants like C,E and Selenium and several critical metabolic cofactors, Redox-24 increases the level of Glutathione, the most important antioxidant in your body. Glutathione is found within every cell of your body, as it is a molecule critical for cellular health. Using the highest quality ingredients available, Redox-24 provides essential building blocks to make new Glutathione, along with important cofactors that allow used Glutathione to be recycled and re-activated

CytoShield

Polyenylphosphatidylcholine (PPC) is a critical part of the membranes of your cells. It keeps these membranes fluid and smooth so that they can grow, communicate, and interact with all the other organs of your body.

Traditionally, the cell membrane was thought of as the protective outer layer of the cell, and was assumed to be quite rigid and static. We now understand that this membrane is actually a two dimensional phospholipid bi-layer, within which proteins are continuously moving, interacting, changing shape, and communicating with the environment outside the cell. These activities are essential for each cell to carry out the specific tasks they were encoded to perform, and interconnect with the rest of the body.

The speed, ability, and quality, of these protein interactions are determined by the fluidity of the membrane. Saturated phospholipids create a thick, densely packed bi-layer in which proteins do not move well - like ships trying to sail on an ocean of honey.

PowerCell(GSH+)

PowerCell contains all the necessary ingredients to intensely enhance the production of intracellular glutathione, the most critical intracellular antioxidant. Extracellular concentrations are also increased by the addition of pre-formed glutathione. Since collaboration of antioxidant systems is critically important, it also contains curcumin, a potent anti-inflammatory and antioxidant compound. These, combined with milk thistle extract and the critical antioxidants Lipoic acid and Selenium, provide a broad protection from oxidative and inflammatory insults to your body's cells, thus protecting healthy cellular function. The amino acid Glutamine will help GI health and provide the liver with metabolic substrate. The amino acid Glutamine that is also provided will help gastrointestinal health, reducing the impact of toxic stimuli to your body.

Unsaturated phospholipids such as PPC create smooth, flowing membranes, which allow for optimal protein interactions, cellular function, and organ health.

Advanced Resveratrol

Enhances Vitality & Longevity

Resveratrol ... the life extending, anti-aging molecule that has everyone talking and scientists around the world scrambling to figure out! Our Advanced Resveratrol is 99% pure Trans-Resveratrol - the highest concentration available of the active Isomer! Resveratrol has rapidly advanced through a huge worldwide research effort into one of the most exciting nutraceuticals known to man at this time. Its combined effectiveness as a powerful antioxidant, protein and DNA protector, anti-cancer molecule, anti-inflammatory, cardiovascular protectant, and stimulator of numerous beneficial genes, provides the realistic potential to broadly enhance health.
